aminoglycoside acetyltransferase regulator [imported] - Providencia stuartii
C;Species: Providencia stuartii
C;Accession: T51162
R;Macinga, D.R.; Cook, G.M.; Poole, R.K.; Rather, P.N.
J;Bacteriol. 180, 128-135, 1998
A;Title: Identification and characterization of aarF, a locus required for production artii.
A;Reference number: 225318; MUID: 98083065
A;Accession: T51162
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Residues: 1-544 <AAC>
A;Cross-references: ERBL:AF002165; PIDN:AAB96577.1

GALACTOSYLEBRANIDE, ALACTOSYLEBRANIDE, AND MONOGALACTOSYLEBRANIDE, AND MONOGALACTOSYLEBRANIDE, AND MONOGALACTOSYLEBRANIDE, AND MONOGALACTOSYLEBRANIDE, AND MONOGALACTOSYLEBRANIDE, AND MAJOR LIPID IN WELIN, KIDNEY AND EPITHELIAL CELLS OF SMALL INTESTINE AND COLON (BY SIMILARITY)

C. -!- CATALYTIC ACTIVITY: D-galactosyl-N-acylsphingosine + H(2)O = D-qalactose + N-acylsphingosine - H(2)O = D-qalactose + N-acylsphingosine - H(2)O = D-CATALYTIC ACTIVITY: Lysosomal (By similarity).

C. -!- DISEASE: DEFECTS IN GALC ARE THE CAUSE OF GLOBOID CELL LEUKONSTROPHY (GLD). THIS DEFICIENT RESULTS IN THE INSUFFICIENT CATABOLISM OF SEVERAL GALACTOLIPIDS THAT ARE IMPORTANT IN THE PRODUCTION OF NORMAL MYELIN.

C. -!- SIMILARITY: BELONGS TO FAMILY 59 OF GLYCOSYL HYDROLASES.

Mol. Biol. 214:39-53(1990).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Analysis of F factor TraD membrane topology by use of gene fusions and trypsin-sensitive insertions."
J. Bacteriol. 181:16108-6113(1999)
J. Bacteriol. 181:16108-6113(1999)
J. Bacteriol. 181:18AD IS A CELL ENVELOPE PROTEIN. THE FUNCTION OF TRAD IS UNKNOWN BUT IT IS ESSENTIAL FOR DNA TRANSFER. IT MAY FORM OR MAY BE PART OF A NON-SPECIFIC PORE FOR DNA EXPORT, OR IT MAY DIRECTLY ENERGIZES DNA TRANSPORT.
J. SUBCELLOLAR LOCATION: Integral membrane protein. Inner membrane.
-: SIMILARITY: TO THE TRAD OF PLASMID INCFII R100.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Jalajakumari M.B., Guidolin A., Buhj H.J., Manning P.A.; "Surface exclusion genes traS and traT of the F sex factor of Escherichia coli K-12. Determination of the nucleotide sequence and promoter and terminator activities."; J. Mol. Biol. 198:1-11(1987).

-i- FUNCTION: CA(2+)-REGULATED ACTIN-BINDING PROTEIN. ITS CAPPING FUNCTION: IS LOCALIZED TO DOMAIN I; ITS SEVERING ACTION IS ACCOMAIN I. AND THE CAPPING ACTILY OF DOMAIN I.

-i- SUBUNIT: MONOMER.
-i- SIMILARITY: BELONGS TO THE VILLIN/GELSOLIN FAMILY.
-i- SIMILARITY: CONTAINS 6 GELSOLIN-LIKE REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                SIMILARITY).

```
protein Proclated around a distilphide bond found in Proc. The stable structure is a specific marker of PrPc but not soluble prion protein (PrPsc). The PrPc peptide sequences can be used to generate an antibody or binding agent that binds PrPc. The antibody is used to detect or remove PrPc, and may be used in preventative medicine. The antibody may be used in the prevention, treatment or diagnosis of a prion disease, e.g. spongiform encephalopathies, such as Scraple in sheep, bowine spongiform encephalopathies, such as Scraple in sheep, bowine (CLD) in humans. The present sequence represents the cellular form of marsupial prion protein, the stable region of the protein may be used in the production of anti-PrPc antibodies.
                                                                                                                                                                                     This invention relates to a peptide fragment of a cellular form of prion
                      New prion peptide for treating, preventing and/or diagnosing prion diseases e.g. scrapie in sheep, bovine spongiform encephalopathies in cows and Creutzfeldt-Jakob disease in humans .
                                                                                                                                  Claim 3; Fig 5; 69pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cells they are expressed in such as intinflammatory; antirheumatic; antiartantic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system; virucide; antibacterial; endocrine; cardiant; central nervous system; virucide; antibacterial; endocrine; cardiant; cardiavascular; antianaemic; antianaemic; antianaemic; antianaemic; antianaemic; antianaemic; or secopathic; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, hematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       neuroprotective; cardiant; cerebroprotective; cytostatic; antidiabetic; vulnery; STE20; protein kinase; STLK2; STLK3; STLK4; STLK5, STLK6, STLK7; SC1, ZC2, ZC3, ZC4, KHS2, SULU1, SULU3, GEK2, PAK4; PAK5; antaqonist; antibody; gene therapy; rheumatoid arthritis; artherosclerosis; asthma; inflammatory bowel disease; Crohn's disease; costeoarthritis; psoriasis; rhinitis; autoimmunity; organ transplantation; multiple sclerosis;

```
This sequence represents a novel STE20-related protein kinase. The invention relates to nucleic acid molecule encoding a kinase polypeptide selected from STLKS, ST
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antirheumatic; antiathritic; antiinflammatory; antiallergic; osteopathic; antipsoriatic; antiarteriosclerotic; antiasthmatic; immunosupressive;
                                      oxidative stress-related neurodegenerative disorder; Parkinson's disease; maylotrophic lateral sclerosis; Leigh syndrome; cancer; cardiomyopathy; ischemic disorder; inflammation; diabetes mellitus; fibrosis; mitosis; mesangial disorder; growth regulation; wound healing; T cell activation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cardiomyopathies, ischemic disorders, inflammatory disorders, diabetes mellitus, fibrotic and mesangial disorders. The proteins may also be useful for cell yrowth regulation (e.g. in wound healing), T cell activation, mitosis control, and as immunosuppressants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel kinase-related polypeptides used for the diagnosis and treatment of kinase-related diseases and disorders \,
nyocardial infarction; cardiovascular disease; stroke; renal failure;

Rat TAO1 kinase. 27-JAN-2000

```
This sequence represents a consensus peptide sequence conained in novel
STE2O-related protein kinases. The invention relates to a nucleic acid
molecule encoding a kinase polypeptide selected from STLK2, STLK3, STLK4,
STLK5, STLK6, STLK7, ZC1, ZC2, ZC3, ZC4, KRE2, SULU1, SULU3, GER2, PRK4,

The present sequence represents rat TAO1 protein kinase, which is capable of phosphorylating MEK3 (a MAP/ERK kinase). TAO kinases, and related polipyeptides, are used to screen for modulators of stress-responsive mitogen activated protein (MAP) kinase pathways. These modulators are potentially useful for treating or preventing: (1) inflammation, autoimmune disease, cancer and degeneration (inhibitors of phosphorylation); or (2) insulin-resistant diabetes, metabolic disorders and neurodegeneration (enhancers of phosphorylation). TAO kinases are also used to raise specific antibodies, useful therapeutically as modulators and as immunoassay reagents for detecting TAO kinases. TAO kinase polynucleotides can be used: (a) for recombinant expression of TAO kinase polynucleotides in standard hybridisation and amplification tests. TAO kinases are highly specific for MEK3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic;

The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemoteatic/chemokinetic activity, heemostatic and thrombolytic activity, and cationis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activity the activity chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention signalizations genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                           Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                     (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Novel secreted factor encoded by clone P00188D12 which is differentially expressed in certain disease states, useful in diagnosing and treating cardiac, renal or inflammatory diseases

Claim 1; Fig 1; 71pp; English.

The patent discloses novel secreted factor protein encoded by clone pollsease states. Secreted factor is differentially expressed in certain disease states. Secreted protein, its antibodies, antigonists or compositions comprising them are useful in the diagnosis and treatment of cardiac diseases such as congestive heart failure, myocardiis, hybritopius, cardiangpathy, angina pectoris, myocardial infarction, cardiac arrhythmia, arteriosclerosis, kidney diseases such as acute renal failure, renal glucosuria, renal infarction, nephrogenic diabetes insiphdus, polycystic kidney diseases, hereditary nephritis and inflammatory diseases such as asthma, autoimmune diabetes, tumour angiogenesis, rheumatoid arthritis, osteoarthritis, toxic shock syndrome, astroke, neural trauma, psoriasis, cerebral malaria, osteoporosis, Crohn's disease, ulcerative colitis, Alzheimer's disease. Secreted protein DNA is useful in antisense-mediated gene inhibition and in gene therapy. An array comprising one or more oligonucleotides complementary to reference RNA on DNA encoding the secreted factor is useful for detecting cardiac, kidney and inflammatory disease.
